### Introduction to Warehouse Management

Make informed design decisions on your Manhattan solution with an integrated, foundational knowledge of system functionality. Manhattan Active® Warehouse Management is one of a comprehensive series of hands-on training courses offered through Manhattan Customer Training. The combination of certified Training Consultants and activities-based courseware will provide the shortest distance between solution and adoption to deliver a fast return on your investment.

### INBOUND

- **Receiving and Quality**—Discover what information you need in order to receive inventory into Manhattan Active WM, as well as ways to capture and view shipment, PO and ASN attribute information. See Manhattan's basic receiving flow and learn when and why Perpetual Inventory Transactions (PIX) are generated.
- **Quality Control**—Experience how quality control can occur within Manhattan Active WM, including Condition Codes, Rules, Vendor Performance and more.
- **System-Directed Putaway**—Identify how you can take the control of Putaway processing out of the hands of your warehouse workers and let Manhattan Active WM determine the right location for your inventory based on rules and options by area of your warehouse.
- **Cycle Counting**—Explore how Manhattan uses the Cycle Counting feature to ensure that physical, Host/ERP and Manhattan Active WM inventory quantities are all in line.

### OUTBOUND

- **Order Fulfillment**—Review the templates, parameters and rules that drive Order Streaming and Waves to fulfill orders.
- **Replenishment**—Examine ways to complete Replenishment through the use of lean time and order streaming/waving.
- **Allocation**—Learn the options that are available in Manhattan Active WM that will guide your Allocation logic.
- **Cubing**—Understand the way system-directed cartonization is used in Manhattan Active WM.
- **Picking and Packing**—Assess various operational ways Manhattan Active WM manages picking and packing and learn the picking methods supported.
- **oLPN Consolidation**—Evaluate how your system can efficiently bring together inventory allocated to the same order but located in separate parts of the warehouse.
