

UNIFIED LOGISTICS CONTROL

ONE EXPERIENCE FOR COMMAND AND CONTROL OF THE ENTIRE TRANSPORTATION NETWORK

To be most effective, planners need real-time visibility into their entire transportation network — combined with the ability to immediately take action — within a single solution, whether in the office or on the road.

ONE EXPERIENCE

Unified Logistics Control within Manhattan Active® Transportation Management (TM) is a single-user experience for command and control of every rate, route, mode, node and load.

Explore a network-wide view of real-time insights across all orders and shipments, as well as invoices for all links and nodes in the organizational supply chain. Quickly drill into details for selected orders and shipments to understand history, cost, current status and performance.

Unified Logistics Control is the heart of task planning and execution with the ability to search, identify and act upon real-time details across the network. Create user-specific searches and easily view critical data across workflows.

Multiple experiences have now been integrated into a common-user interface, with the ability to take control of any situation:

- Manually plan shipments for truckload, less-than-truckload, rail, air, ocean and more
- Easily add or remove orders from shipments, combine shipments or re-sequence shipment stops
- Quickly locate matching shipments for unplanned orders and modify carrier assignments or transportation resources
- Perform quick rate lookups, create appointments and manage exceptions
- Broadcast tenders to core carriers and digital freight brokers, for both contract and spot activity
- Initiate waves without ever leaving the comforts of Unified Logistics Control within Manhattan Active TM

INTUITIVE:

Modern, intuitive, centralized planning experience with actionable insights for command and control of the entire network

DYNAMIC:

Cloud-connected visibility, capacity, weather and traffic updates for more accurate insights and improved planning decisions

UNIFIED:

Same unified look, feel and performance experience — as with all other Manhattan Active® Supply Chain solutions

A simple tap on the console reveals an order or shipment-level view with details on what the issue may be, all the way down to the underlying tasks. With another quick tap, it's easy to see status, ETA and any exceptions that need to be addressed.

Communication with peers across the transportation network is simple, as well. Real-time, instant-messaging capabilities are included within all Manhattan Active® Supply Chain solutions, so no need to leave the application to collaborate.

MORE IMMERSIVE

These days, transportation planners need to move fast! And that means having everything you need at your fingertips, no more than a click or a tap away. Information about orders, shipments, carriers, facilities, rates and more — all at the ready. Unified Logistics Control provides that and much more.

Notifications proactively alert users to exception areas, such as scheduled appointments that may be at risk because an appointment time is in danger of being missed. Planners can gain visibility when shipments are due, whether they are running on time or late, and adjust plans accordingly to eliminate bottlenecks before they happen.

MORE UNIFIED

Manhattan Active™ is now part of Manhattan Active Supply Chain, a single, cloud-native application for distribution, labor, automation and transportation. The user experiences across Unified Logistics Control and Unified Distribution Control are shared, intuitive and extensible, enabling a singular, actionable view of the unified supply chain. Unlike traditional “control towers” that present information gathered from legacy supply chain systems in a dashboard — but have no real control over that data — Manhattan Active Supply Chain solutions empower users to solve problems and exploit opportunities.

For the first time, real-time insights regarding the health and performance of inbound- and outbound-logistics functions have been unified, with the ability to immediately execute upon those findings. That's right: Insight and execution are included in one app, with no integration and no delay.

Unified Logistics Control within Manhattan Active™ means unprecedented command and control of the distribution network from the office or on the road, with detailed views from the entire network down to the smallest shipment and everything in-between.
